Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Automotive Silicone Rubber competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Automotive Silicone Rubber production reached approximately 120k tons, with an average global market price of around US\$ 5000 per ton. Automotive silicone rubber is a high-performance elastic material specifically designed for the automotive industry. It is made from polysiloxane as the matrix, combined with reinforcing fillers, crosslinking agents, and various additives. It possesses excellent high-temperature resistance, low-temperature resistance, oil resistance, electrical insulation, aging resistance, and airtightness. It maintains stable performance in environments ranging from -60° to 250° and even 300°, making it an ideal alternative to traditional rubbers (such as EPDM, NBR, and FKM). The automotive silicone rubber industry chain encompasses upstream raw material supply, midstream compounding and processing and component manufacturing, and downstream vehicle and electronic system integration. Upstream main raw materials include siloxane monomers, fumed silica, coupling agents, crosslinking agents, pigments, and additives. Major suppliers include Wacker, Dow, Momentive, Elkem, Shin-Etsu, Bluestar, and Evonik. The midstream includes silicone rubber compounding and molding companies, with representative manufacturers including Hoshine Silicon Industry, Chenhua New Materials, and Dongyue Silicon Materials. Downstream application companies cover OEMs and Tier 1 automotive component suppliers, such as Bosch, Continental, BYD, Tesla, Toyota, Volkswagen, Huawei, Aptiv, and LG Innotek. The annual production capacity of a single-line Automotive Silicone Rubber is approximately 3.5k tons, with a gross profit margin of approximately 25%-40%. Currently, the automotive silicone rubber market is in a phase of rapid development, driven by the trends of new energy vehicles, automotive

electrification, and smart cockpits, resulting in continuously expanding demand. Silicone rubber, with its high-temperature resistance, electrical insulation, and environmentally friendly properties, has become a key solution replacing traditional rubber materials (EPDM, NBR), particularly in areas such as high-voltage cables, power battery sealing, ADAS sensor encapsulation, and automotive display module protection. International manufacturers (such as Wacker, Dow, Elkem, and Shin-Etsu) dominate the high-end market due to their formulation technology and brand advantages, while Chinese manufacturers excel in cost control and large-scale production, leading to a bipolar global competitive landscape. Future development will focus on high-heat-resistant, low-volatility, low-dielectric-loss, and recyclable formulation systems to support the automotive industry's transformation towards green and high-performance directions.

The global Automotive Silicone Rubber market size was estimated at USD 592.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.
