## Abstracts

An automotive single exhaust system is a type of exhaust system in automobiles. In the exhaust stroke of an in-line engine, the exhaust gas in the cylinder passes through the exhaust valve into the exhaust manifold, and then enters the exhaust pipe, catalytic converter and muffler through the exhaust manifold, and is finally discharged into the atmosphere through the exhaust tailpipe. For V-type engines, although there are two exhaust manifolds, in most cases, a single exhaust system is still used. That is, the two exhaust manifolds are connected to one exhaust pipe through a fork pipe. The exhaust gas from the two exhaust manifolds is discharged through the same exhaust pipe, muffler and tailpipe.

The global Automotive Single Exhaust System market size was estimated at USD 16750.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.
