Abstracts

Automotive snow tire chains are traction devices installed over a vehicle's tires to enhance grip on snow- or ice-covered roads by providing additional biting edges and preventing slippage. These products consist of metal chains, cables, or composite materials arranged in cross-linked patterns and are designed for temporary use in severe winter conditions where standard winter or all-season tires may prove insufficient. They are commonly used by drivers in regions with heavy seasonal snowfall, steep terrain, or legal requirements for chain-equipped travel during winter months, and are available in various configurations such as diamond, ladder, or cable-style chains to accommodate different vehicle types, tire sizes, and user preferences for ease of installation, durability, and road surface protection.

The global Automotive Snow Tire Chains market size was estimated at USD 145.3 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
