Abstracts

Sparking cables, also known as ignition cables or high-tension leads, are insulated electrical conductors that transmit high-voltage current from the ignition coil or distributor to the spark plugs in internal combustion engines, enabling the controlled ignition of the air-fuel mixture necessary for engine operation; they are typically constructed with a conductive core (such as carbon, copper, or stainless steel strands), surrounded by multiple layers of insulation (often silicone or EPDM rubber) to withstand extreme temperatures, engine vibrations, and electrical interference, and are equipped with terminal connectors and boots to ensure secure, corrosion-resistant connections at both ends.

The global Automotive Sparking Cable market size was estimated at USD 3200.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
