Abstracts

A speedometer cable is a mechanical component traditionally used in vehicles to transmit rotational motion from the transmission or wheel hub to the speedometer gauge, providing the driver with real-time speed information. It consists of an inner cable, often made of wound steel, which rotates inside a protective outer housing, and functions through direct physical connection rather than electronic signals. Historically dominant in older and some budget-oriented modern vehicles, this technology has largely been supplanted by electronic speed sensors in newer models due to advantages in accuracy, durability, and integration with digital dashboards and onboard computers.

The global Automotive Speedometer Cable market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of -3.75% during the forecast period.
