### Report Overview

Increasing requirement for automotive vehicles in different end-use industries is expected to drive the automotive steel casting market. In automotive steel casting, the steel is heated until it reaches a molten state and subsequently, this liquid steel is used to manufacture various components of the vehicle. In this process, liquid steel is delivered into the hollow mold, which has different shape and size. Once the steel is cooled, it is removed from the mold as a finished product. This steel casting is also called as hot chamber die casting, which is commonly utilized to manufacture complex shapes and structures of the vehicle.
