Abstracts

Automotive steel wheels are structural components used in vehicles to support tires and facilitate motion, typically manufactured from stamped or rolled steel sections welded together to form a rigid, durable, and cost-effective circular frame. These wheels are distinguished by their robustness, affordability, and suitability for a wide range of vehicles?from passenger cars and light trucks to commercial and off-road applications?due to their ability to withstand harsh conditions, impacts, and heavy loads while offering ease of manufacturing and recyclability.
