Abstracts

Automotive steering racks are a critical component in modern vehicle steering systems, specifically in rack-and-pinion configurations, where they convert the rotational motion of the steering wheel into linear motion to turn the wheels, providing precise directional control and responsiveness. The market for automotive steering racks is driven by the global automotive production and aftermarket sectors, with increasing demand for electric power steering (EPS) systems due to their fuel efficiency benefits and integration with advanced driver-assistance systems (ADAS). Key trends include the shift toward lightweight materials for improved vehicle efficiency, the growth of electric vehicles which often utilize steer-by-wire or enhanced EPS technologies, and rising safety standards mandating more reliable and durable steering components.

Geographically, Asia-Pacific dominates due to high vehicle production in countries like China, Japan, and India, while North America and Europe show strong aftermarket demand and adoption of advanced steering technologies. The market is characterized by competition among established automotive suppliers, technological innovation, and the need for compliance with stringent regulatory frameworks focused on vehicle safety and emissions.

The global Automotive Steering Racks market size was estimated at USD 8342.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
