Abstracts

Automotive suspension ECUs are electronic control units specifically designed to manage the active and semi-active suspension systems in vehicles, which process real-time data from sensors (such as wheel position, vehicle speed, steering angle, and road conditions) to adjust damping characteristics, ride height, and stability dynamically. These systems enhance driving comfort, safety, and handling by adapting to varying terrains and driving styles, commonly found in luxury, performance, and increasingly in mainstream vehicles equipped with advanced driver-assistance systems (ADAS). The evolution of suspension ECUs is closely tied to trends in electrification, autonomous driving, and connectivity, as they contribute to overall vehicle dynamics management and integration with other chassis control systems.

The global Automotive Suspension Ecu market size was estimated at USD 1132.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.75% during the forecast period.
