Report Overview

Electric Vehicles (EVs) and Hybrid Electric Vehicles (HEVs) require a traction inverter to convert dc energy from the high-voltage battery or dc link bus to the three-phase ac energy used to drive the traction motor. Traction inverters are typically capable of transferring power in the 20 to 200 kW range, with switching voltages in the 200 V to 800 V range and currents in the hundreds of amperes.

Traction inverters convert dc power from an on-board high voltage (HV) battery into ac power to drive the main motor or motors of an electric vehicle. In addition, traction inverters perform functions such as voltage boosting, switch protection and regenerative braking.
