## Abstracts

An automotive transmission oil cooler is a device specifically designed to cool the transmission fluid in an automatic transmission (AT) or continuously variable transmission (CVT). Its primary function is to dissipate heat from the transmission fluid, keeping it within the optimal temperature range. By efficiently exchanging heat, the transmission oil cooler prevents the fluid from overheating, which could degrade its performance and cause transmission failure. This ensures smooth shifting and prolongs the lifespan of the transmission system.

The global Automotive Transmission Oil Coolers market size was estimated at USD 645.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.70% during the forecast period.
