Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Automotive TSN Switch competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The Automotive TSN Switch is a system-level switch chip designed for in-vehicle Ethernet, integrating time-sensitive networking protocols and traffic scheduling units to deliver deterministic latency and high-reliability communication under automotive-grade requirements. In 2024, the production of Automotive TSN Switches was 257,627 units with an average price of 295 USD per unit. In 2024, the annual capacity per production line was approximately 2,000 units, with an average gross margin of around 53%. The upstream primarily consists of silicon wafers and wafer materials, packaging and test consumables, and high-precision semiconductor fabrication equipment such as lithography, etch and ion implantation systems, with representative suppliers including SUMCO, GlobalWafers, Shin-Etsu and Shanghai Silicon Industry Group; packaging and test suppliers include Amkor and JCET; equipment suppliers include ASML, Applied Materials, Lam Research and AMEC. The midstream focuses on chip system architecture design, integration of switching and time-synchronization functions, firmware and driver development, and functional and interoperability testing, emphasizing automotive-grade time-sensitive traffic scheduling, deterministic latency guarantees and system-level reliability validation. The downstream customers are passenger car and commercial vehicle OEMs and in-vehicle system integrators, represented by companies such as BMW, Toyota, Volkswagen and Chinese firms like BYD and Geely. The automotive TSN switch market is entering a rapid growth phase driven by the acceleration of vehicle electrification, intelligent networking, and domain centralized architectures. As Ethernet becomes the backbone of in-vehicle communication, TSN (Time-Sensitive Networking) technology provides deterministic

latency and precise synchronization essential for ADAS, autonomous driving, and zonal controllers. With Tier-1 suppliers and semiconductor companies integrating TSN into automotive Ethernet platforms, the market is expected to expand significantly in the next five years, supported by large-scale mass production of centralized domain controllers and 10G automotive Ethernet.

The global Automotive TSN Switch market size was estimated at USD 76.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 19.20% during the forecast period.
