## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Automotive VCI Film competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Automotive VCI Film production reached approximately 9,775 tons with an average global market price of around US\$15,000 per ton. Automotive VCI Film is a specialized protective wrap designed to shield vehicles from corrosion during storage and transit by utilizing volatile corrosion inhibitors that envelop the metal surfaces with an invisible, protective barrier. This film not only provides a physical barrier against moisture, salt, and other corrosive agents but also actively releases corrosion-inhibiting compounds that adsorb onto the metal, creating a molecular layer that interrupts the electrochemical processes responsible for rust formation. Its use ensures that automotive components remain in pristine condition, preserving the vehicle's value and appearance, while simplifying the logistics of moving vehicles across various climates and environments without the need for additional rustproofing treatments.

The global Automotive VCI Film market size was estimated at USD 147.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
