## Abstracts

Automotive window endothermic insulation film is a type of specialized window film designed to absorb and dissipate heat through an endothermic process. Unlike reflective films, which primarily work by reflecting heat away, endothermic films absorb infrared (IR) radiation and then convert it into heat that is dissipated within the film itself or released from the vehicle. This helps to maintain a cooler interior by reducing the amount of heat that enters the cabin. The film achieves this through the use of advanced materials and coatings that undergo chemical or physical changes when exposed to heat, making it highly effective in hot climates or sunny conditions.

The global Automotive Window Endothermic Insulation Film market size was estimated at USD 1000.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
