Abstracts

Automotive window rain guard is an accessory installed on the edge of a car window, usually made of synthetic resin, engineering plastic, rubber, PVC or TPU. In rainy weather, it can effectively prevent rain from directly pouring into the car, prevent rain scraped by the wipers from being blown into the car by the wind, keep the car dry, and prevent the driver and passengers from getting wet when the window is open. On rainy days, you can also open the car window to leave a little gap to allow air to circulate inside and outside the car, improve the air environment inside the car, and avoid the air in the car from being stuffy, humid or producing odors due to long-term closure of the window. At the same time, it can also help regulate the temperature inside the car and reduce the possibility of fogging of the windshield inside the car.

The global Automotive Window Rain Guard market size was estimated at USD 691.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
