Abstracts

The automotive wiper motor is an integral electromechanical component responsible for converting electrical energy into mechanical motion to drive windshield wiper blades, ensuring clear visibility for drivers in adverse weather conditions. These motors are typically permanent magnet or series-wound DC motors equipped with internal gear reduction mechanisms and often feature multi-speed settings, intermittent operation, and built-in automatic parking functions. Designed for durability and consistent torque output, they must withstand environmental stressors such as temperature extremes, moisture, vibration, and prolonged cyclic operation. Modern variants increasingly incorporate electronic controls for adaptive speed adjustment and integration with rain-sensing systems, aligning with broader automotive trends toward enhanced safety, driver assistance features, and electrification.

The global Automotive Wiper Motor market size was estimated at USD 4650.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
