## Abstracts

Autonomous aircraft is a fully automated manned or unmanned aircraft that require minimum or no human intervention in its operations. Autonomous aircrafts can be identified with their ability to perform complex maneuvers for extended period of time at remote distances. Autonomous aircraft flight management computers are made of various avionics systems involving system-on-a-chip (SOC) & single-board computers (SBC) for controlling flight management systems such as navigation, flight path, and auto-pilot system among others. Further, installation of autonomous aircraft flight management computer system on an aircraft reduces the workload of operator. Market CAGR for autonomous aircraft flight management computers is being driven by the rising adoption of artificial intelligence (AI). In hazardous environments or situations where people are unable to operate, autonomous aircraft lessen the hazards of human mistakes. The US Air Force revealed that it had set the goal of conducting a face-off between an autonomous drone armed with an artificial intelligence-driven flight management and control system and a fighter jet with a human pilot.

The global Autonomous Aircraft Flight Management Computers market size was estimated at USD 2156.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.10% during the forecast period.
