Report Overview:

Autonomous Driving Lidar is a radar system used in the automotive industry that emits laser beams to detect the position, velocity, and other characteristic quantities of targets. Its working principle is to transmit a detection signal (laser beam) to the target, and then compare the received signal (target echo) reflected from the target with the transmitted signal, and after proper processing, the relevant information of the target can be obtained, such as Parameters such as target distance, bearing, height, speed, attitude, and even shape can be used to detect, track, identify and avoid targets.

The Global Autonomous Driving Lidar Market Size was estimated at USD 675.81 million in 2023 and is projected to reach USD 3071.14 million by 2029, exhibiting a CAGR of 28.70% during the forecast period.
