Abstracts

Autonomous Drone in a Box (DiaB) refers to a fully integrated, self-contained system where a drone is housed within a weatherproof, secure enclosure that serves as its base station, enabling automated operations without human intervention beyond initial setup and remote monitoring. The system includes hardware components such as the drone, docking station with mechanisms for battery swapping and recharging, environmental sensors, and communication modules, combined with sophisticated software for flight planning, mission execution, data processing, and fleet management. These systems are designed for repetitive, scheduled missions?such as infrastructure inspection, security patrols, emergency response, or agricultural monitoring?where the drone autonomously takes off, performs its tasks, returns to the box for maintenance (e.g., battery replacement or data upload), and prepares for the next mission, significantly reducing operational costs and increasing efficiency.

The global Autonomous Drone In A Box market size was estimated at USD 275.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 28.75% during the forecast period.
