Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Autonomous Pure Electric Bus competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Autonomous Pure Electric Bus refers to a public transportation vehicle powered entirely by electric energy and capable of operating through the use of advanced autonomous driving technologies. These buses integrate electric propulsion systems with sensors such as LiDAR, radar, cameras, and GPS, combined with artificial intelligence algorithms to enable perception, decision-making, and navigation in complex urban or closed-road environments. Semi-autonomous Bus (L3) may be able to keep in lane, and they may also be able to park themselves, but they are not self-driving. In most cases, drivers must keep their hands on the wheel at all times. Fully autonomous bus (L4) encounters just as many obstacles as an ordinary car or bus. The difference is that the fully autonomous bus must be equipped with an 'awareness' that can manage all the information it receives during its journey. In 2024, global Autonomous Pure Electric Bus production reached approximately 938 Units, with an average global market price of around K US\$ 301.22 per Unit. Global production capacity in 2024 will be approximately 1200 Units. The upstream raw materials mainly include electronic and semiconductor components, battery systems and power electronics, mechanical and structural materials, and software and autonomous driving platforms. The major material suppliers include NVIDIA, Intel (Mobileye), AMD, Velodyne, Hesai, Innoviz, and Bosch, as well as CATL, BYD, LG Energy Solution, Panasonic and Samsung SDI. The downstream application customers are mainly concentrated in urban public transportation, closed-site mobility, and autonomous shuttle pilot projects, forming a vertically integrated ecosystem from material suppliers to smart city operators.

The global Autonomous Pure Electric Bus market size was estimated at USD 283.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 25.00% during the forecast period.
