Report Overview

Autonomous tractors use a lot of the same advanced sensors and systems that a true self-driving vehicle would. Most tractors sold in the U.S. already include auto-steering systems that give additional control even in low-visibility situations. By implementing these advanced features in everyday farming, growers can really put the power of tech to work.

The incorporation of technology into agriculture has allowed farmers to increase efficiency in their farms. The introduction of technology into the management of farms by the farmers and other agricultural stakeholders has facilitated the farmers to get high yields and produce in the farm while using less inputs and resources.

The future success of agriculture is still heavily dependent on technology and how well farmers and other agricultural stakeholders are able to leverage the overall benefits of technology and tailor make them to be used for the benefit of the agricultural sector. One such technology that is going to make a very big difference in the field of agriculture going into the future is the autonomous tractor.

The autonomous tractor employs high-tech systems and sensors to enable it move around without being manned by a driver. To enable it move around the autonomous tractor will be remotely monitored and directed by a farmer or a technician who is not on site. The tractor will be directed remotely by directing it into areas of the farm that have already been mapped. To enable it avoid obstacle it will be fitted with obstacle detection sensors that will enable it stop so as to enable the obstacles to clear before it continuous with its journey.
