Abstracts

The Autonomous Valet Parking (AVP) System is an advanced intelligent transportation technology system designed to automate the parking and retrieval of vehicles within parking lots without direct driver intervention. Leveraging a multitude of advanced technologies such as environmental perception, high-precision positioning, and communication, the system offers functions including autonomous space detection, automatic parking, remote vehicle summons, and safety protection during driving. Through a mobile phone application, users can have their cars independently navigated to and parked in designated spots in the parking lot, eliminating the need for a driver to park the vehicle. Implemented through a multi-sensor approach incorporating machine vision, LiDAR (Light Detection and Ranging), millimeter-wave radar, and more. The AVP constitutes a favorable condition for the large-scale application of L4-level autonomous driving and stands as one of the key applications in the fields of intelligent transportation and autonomous driving.

The global Autonomous Valet Parking Systems market size was estimated at USD 2274.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
