Report Overview:

Autotransfusion System (ATS) is a sophisticated device with an exceptionally effective design that provides autologous blood during surgical procedures. Autotransfusion is a process wherein a person receives their own blood for a transfusion, instead of banked allogenic (separate-donor) blood. There are two main kinds of Autotransfusion: Blood can be autologous "pre-donated" (termed so despite "donation" not typically referring to giving to one's self) before a surgery, or alternatively, it can be collected during and after the surgery using an intraoperative blood salvage device. The latter form of Autotransfusion is utilized in surgeries where there is expected a large volume blood loss.
