Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Auxiliary Converter competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The auxiliary converter is an important device in the locomotive power system for converting direct current into alternating current. It mainly consists of rectifier, filter, inverter, control circuit and protection device. The auxiliary converter has the advantages of safety and reliability, high conversion efficiency, small size, and high degree of integration. As an indispensable part of the power system of modern railway locomotives, the stability and reliability of its performance are directly related to the normal operation of the locomotive and passenger travel safety. Its price is affected by various factors such as equipment type, brand and function, ranging from \$10,000 to \$30,000 per unit. Sales reached several thousand units in 2024, and the industry gross profit ranged from 25% to 40%. Upstream in the industry chain, the industry primarily relies on high-performance power electronic components, such as IGBT modules, high-power capacitors, high-frequency transformers, complex control chips, and sensors. Downstream applications are mainly concentrated in rail transit equipment manufacturing, with demand growth highly correlated with national infrastructure investment and new energy industry policies. The continued expansion of global rail transit electrification and urban rail transit networks has created a stable demand base. Currently, the industry's reliance on external suppliers for power electronic components, particularly high-performance IGBT/SiC modules, puts pressure on supply chain stability and cost control.

The global Auxiliary Converter market size was estimated at USD 1833.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
