Report Overview

AV over IP (Audiovisual over Internet Protocol), also known as AV/IP, AV over Network, IP distributed audio and video systems, or Networked audio and video systems. AV over IP refers to the use of standard network equipment to transmit and switch video and audio signal. Like IoT concept of IT industry, it is commonly referred to AV over IP in the ProAV industry. In technical essence, AV over IP provides the transmission of audio and video data over a standard network such as LAN, WAN or Internet cloud, as a similar concept of Netflix from Internet TV. With the popularity of IoT in various industries, AV over IP has been widely used to replace the traditional AV architecture. The traditional A/V architecture is similar to the basic elements and main architecture of AV over IP architecture. From a simple architecture diagram, AV over IP replaces the traditional A/V transmitter (Tx) with an Encoder, and replaces the signal receiver (Rx) with a Decoder. The audio and video matrix switcher is replaced by the standard Ethernet IP switcher. The IP switcher is the same as the one commonly used in every enterprise. As long as your organization has an IT infrastructure, there must be an IP switcher at least.
