Report Overview:

Integrated into a ski backpack or vest, an avalanche airbag safety system is comprised of an airbag and power source (either a canister of compressed air or gas or an electric fan). When a skier (or snowboarder, sledder, etc.) pulls the attached handle, the airbag inflates to about 150 liters around and behind her torso. In the event of a slide, the inflated airbag keeps the skier at or near the surface of the snow thanks to a process known as granular segregation (i.e. in a mixture, larger objects are more likely to stay at the top while smaller objects sink down).

The Global Avalanche Airbag Safety System Market Size was estimated at USD 88.65 million in 2023 and is projected to reach USD 120.85 million by 2029, exhibiting a CAGR of 5.30% during the forecast period.
