Abstracts

Aviation alternative fuel, also known as sustainable aviation fuel (SAF), refers to non-petroleum-based fuels designed to power aircraft while significantly reducing greenhouse gas emissions compared to conventional jet fuel. These fuels are typically derived from sustainable feedstocks such as waste oils, agricultural residues, non-food biomass, or synthetic processes using renewable energy, and must meet strict technical and safety standards to be fully compatible with existing aircraft engines and fueling infrastructure without requiring modifications. The primary objective of aviation alternative fuels is to decarbonize the aviation sector by providing a drop-in solution that lowers lifecycle carbon emissions, enhances energy security, and supports the industry's sustainability targets without compromising performance or safety.

The global Aviation Alternative Fuel market size was estimated at USD 170.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.80% during the forecast period.
