Abstracts

Aircraft anti-icing devices refer to equipment that prevents certain protruding parts of the aircraft from icing or can effectively remove ice when ice forms. Ice on the leading edge of the wing and tail, or on the leading edge of the propeller, the leading edge of the air inlet, and the cockpit windshield can make flight dangerous in serious cases. For example, ice on the leading edge of the wing and tail may change the shape of the wing section, reduce lift, increase drag, and even make flight control difficult and unstable. Ice on other parts will also bring various difficulties. For this reason, anti-icing equipment should be installed in parts that are prone to icing. According to research data from the company's "Construction Machinery Research Center", the total sales of the top 50 global construction machinery manufacturers will reach US\$230 billion in 2022. Asian companies have an absolute advantage, accounting for 50% of sales revenue, followed by Europe. Sales revenue accounted for 26%, and North America accounted for 23%. The construction machinery of the world's top 50 main engine manufacturing companies sold approximately 1.2 million units of construction machinery and equipment in 2021, with sales increasing by 9%. China is currently the world's largest factory machinery market. In 2022, the sales of construction machinery companies will account for 24% of total sales, making it the country with the highest proportion. According to data from the China Machinery Industry Federation, the operating income of the construction machinery industry in 2022 will drop by more than 12%. The operating income of China's construction machinery industry in 2022 will be 797.7 billion yuan. China's annual export volume will reach 44.3 billion US dollars, with a net increase in export volume in two years. amounted to US\$23.3 billion.
