Report Overview

The aviation biofuels market encompasses sustainable fuel alternatives derived from renewable biomass sources such as plant oils, algae, agricultural waste, and non-food crops, designed to reduce carbon emissions in the aviation sector. These fuels, also known as sustainable aviation fuels (SAF), must meet strict technical and safety standards to be compatible with existing aircraft engines and infrastructure. Unlike conventional jet fuels, aviation biofuels significantly lower lifecycle greenhouse gas emissions, making them a critical component of the industry's decarbonization efforts. The market is driven by regulatory pressures, corporate sustainability commitments, and technological advancements in feedstock processing and fuel blending. However, challenges such as high production costs, limited feedstock availability, and the need for scalable supply chains hinder widespread adoption. Key stakeholders include airlines, fuel producers, governments, and research institutions working to improve cost-efficiency and production capacity. The market is expected to grow as global aviation emissions regulations tighten and investment in biofuel infrastructure expands.

The global Aviation Biofuels market size was estimated at USD 2188.15 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.20% during the forecast period.
