## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Axial Flux Permanent Magnet Motors? competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Axial Flux Permanent Magnet Motor production reached about 320,000 units with a capacity near 410,000 units annually, and the average unit price is about USD 3,400. The market achieved a 37% gross margin. Axial Flux Permanent Magnet Motors (AFPMMs) are compact electric motors that generate torque through a magnetic field oriented along the motor?s rotational axis, unlike conventional radial flux designs. They use flat, disc-shaped rotors embedded with permanent magnets and stators with concentrated windings, delivering high torque density, energy efficiency, and compact form factors ideal for electric vehicles (EVs), drones, wind turbines, and robotics. The supply chain begins upstream with raw materials such as neodymium-iron-boron (NdFeB) magnets, copper wire, electrical steel, and high-temperature epoxy resins. Midstream production involves magnet assembly, stator winding, lamination stacking, and precision machining of lightweight aluminum or composite housings. Downstream, these motors are integrated by OEMs and system integrators into propulsion systems, generators, and industrial drives, with distribution channels including EV manufacturers, renewable energy firms, and automation equipment suppliers.

The global Axial Flux Permanent Magnet Motors? market size was estimated at USD 1088.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.40% during the forecast period.
