Report Overview

Azilsartan medoxomil (trade name Edarb) is an angiotensin II receptor blocker (ARB) that lowers blood pressure by blocking the action of angiotensin II, a vasopressor hormone. It is indicated for the treatment of hypertension to lower blood pressure which reduces the risk of fatal and nonfatal cardiovascular events, primarily strokes and myocardial infarctions. Azilsartan medoxomil may be used either alone or in combination with other antihypertensive agents such as chlorthalidone (CLD). As an ARB, azilsartan medoxomil selectively inhibits angiotensin II from binding to the angiotensin II type-1 receptor (AT1). This receptor inhibition provides the antihypertensive activity of azilsartan medoxomil because it blocks the pressor effects of angiotensin II. Azilsartan medoxomil is a prodrug of azilsartan. It is hydrolyzed to the active moiety, azilsartan, in the gastrointestinal (GI) tract during the absorption phase.

The global Azilsartan Medoxomil API market size was estimated at USD 15 million in 2023 and is projected to reach USD 77.40 million by 2032, exhibiting a CAGR of 20.00% during the forecast period.
