Abstracts

Cooking oil refers to oils or fats that are used in the preparation and cooking of food, such as frying, saut?ing, baking, and grilling. It is typically derived from plant sources like soybean, corn, sunflower, olive, and canola, or animal sources like lard and butter. Plant-based oils dominate the global market due to their health benefits, particularly those rich in unsaturated fats, which are considered healthier for the cardiovascular system. Cooking oils not only enhance the flavor and texture of food but also play a crucial role in cooking techniques by providing heat transfer during preparation. Over the years, cooking oils have diversified into various types, including organic, non-GMO, cold-pressed, and specialty oils to cater to the increasing demand for healthier options. The cooking oil market is one of the most essential segments of the global food industry, driven by changing consumer preferences, growing health consciousness, and increased urbanization. Traditionally, vegetable oils such as soybean, sunflower, and palm oil have dominated the market due to their affordability and versatility in cooking. However, there has been a noticeable shift towards healthier alternatives like olive oil, avocado oil, and coconut oil, which are perceived to offer various health benefits, such as lower cholesterol and improved cardiovascular health. This trend is especially noticeable in developed markets, where consumers are increasingly focused on nutrition and sustainable food sources. Additionally, the rise in global population and the growing middle class in emerging markets, particularly in Asia and Africa, have significantly expanded the demand for cooking oils. As these regions continue to urbanize and adopt more Western-style diets, the consumption of cooking oil has surged, further fueling market growth. The demand for specialty oils, including organic, non-GMO, and cold-pressed oils, is also increasing due to growing concerns over food quality, health, and environmental impact. Consequently, the market is seeing continuous innovation with the introduction of premium products designed to cater to a more health-conscious and eco-aware consumer base.

The global Cooking Oil market size was estimated at USD 218360.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
