Abstracts

Baby bottle thermometers are specialized temperature-measuring devices designed to accurately gauge the temperature of liquids, typically milk or formula, in infant feeding bottles, ensuring safety and comfort by preventing scalding or serving liquids that are too cold, and they commonly utilize digital sensors, infrared technology, or traditional liquid crystal displays integrated directly into bottle lids, sleeves, or as standalone probes to provide real-time readings that help caregivers achieve the ideal feeding temperature range, generally recognized as between 98?104°F (36.5?40°C), thereby reducing the risk of nutrient degradation from overheating and minimizing discomfort or refusal by infants sensitive to temperature variations.
