Abstracts

Baby physical sunscreen is a specially formulated sun protection product designed for infants and young children, using mineral-based active ingredients such as zinc oxide and/or titanium dioxide to create a physical barrier that reflects and scatters harmful UV rays away from the skin. Unlike chemical sunscreens, which absorb UV radiation, physical sunscreens sit on the surface of the skin and start working immediately upon application, making them ideal for babies with sensitive or delicate skin. These sunscreens are often hypoallergenic, fragrance-free, and free of harsh additives, minimizing the risk of irritation or allergic reactions. Baby physical sunscreens typically offer broad-spectrum protection against both UVA and UVB rays and are water-resistant, making them suitable for outdoor play and trips to the beach or pool. Their gentle yet effective formula provides peace of mind for parents seeking safe sun protection for their little ones.

The global Baby Physical Sunscreen market size was estimated at USD 302.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
