## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Baby Video Monitoring Systems competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Baby Video Monitoring Systems production reached approximately 30176.8 K Units, with an average global market price of around 46.32 per Unit. A Baby Video Monitoring System is a digital or wireless surveillance device designed to help caregivers monitor infants or young children remotely. It typically consists of two main components: a camera unit placed in the baby's room and a monitor unit or smartphone app used by the caregiver. The system transmits real-time video and audio from the baby's environment, allowing parents to check on their child without being physically present in the room. The core upstream components of baby video monitoring systems mainly include main control chips, video acquisition modules, audio acquisition and interaction modules, wireless communication modules, and sensor modules. Typical suppliers include TI, MTK, Bosch, Sony, Samsung, and STMicroelectronics. Sales channels are primarily online and offline, with typical online sales platforms including Amazon, Alibaba, eBay, and Walmart. The single-line production capacity of baby video monitoring systems is significantly affected by the level of automation and product complexity, resulting in considerable differences. A semi-automatic production line for basic products (including manual assembly and basic testing) has a daily capacity of approximately 800-1200 units, with an annual capacity of 250,000-400,000 units. The industry average gross profit margin remains in the range of 32%-35%. Baby Video Monitoring Systems serve as "intelligent guardians" in the parenting landscape for new-generation families. By integrating audio and video capture with intelligent sensing technologies, they enable remote, real-time monitoring of infants' and toddlers' conditions. As a core platform connecting technology and parenting

needs, they alleviate the caregiving burden on modern dual-income families and become an important tool for implementing scientific parenting concepts.

The global Baby Video Monitoring Systems market size was estimated at USD 1398.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
