This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Back Panel Drilled Tempered Glass competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Back panel drilled tempered glass refers to a type of tempered (heat-strengthened) safety glass that has been pre-drilled with precise holes or notches before the tempering process. These holes are typically used for mechanical mounting, fasteners, cable routing, or integration with hinges, brackets, and electronic components. The glass is subjected to high-temperature heat treatment, which increases its mechanical strength 4-5 times over regular annealed glass. Once tempered, it cannot be further cut or drilled.
