Report Overview
Braces and back support are used to provide relief to individuals with musculoskeletal disorders, especially in the older and middle-aged population. They are also gaining popularity among athletes where majority of injuries are related to lower-back or the spine. To keep up with the evolving needs of the customers, vendors are offering products with ergonomic designs that are made of comfortable and breathable materials.
The increasing number of sports injuries is one of the major growth drivers for the back support market. Most athletes face chronic pain in the event of lumbar spine injury due to excessive physical activities. Lower back and spine injuries account for the majority of the athletic injuries. Over 69% of all adolescent athletes go through lumbar spine and back injuries, whereas, adult athletes report discogenic disorders and muscle strain due to axial loading, twisting, and repetitive hyperextension, which leads to acute lower back pain. These factors lead to more demand for back support belts, which further drive the market for back support for treating sports injuries. APAC is expected to be the fastest-growing region in the market during the forecast period.
Bosson Research’s latest report provides a deep insight into the global Back Support market covering all its essential aspects.
