Abstracts

A backlash-free coupling is a specialized mechanical device designed to connect two rotating shafts while eliminating any angular displacement or play (backlash) between them under varying torque conditions, ensuring precise and synchronous power transmission even during direction reversals or load changes. These couplings typically employ mechanisms such as preloaded springs, elastomeric elements, or multi-disc configurations to absorb and compensate for misalignments—including angular, parallel, and axial types—without introducing free movement, making them critical in applications where positional accuracy, repeatability, and smooth operation are paramount, such as in robotics, CNC machinery, aerospace systems, medical devices, and high-precision instrumentation.

The global Backlash Free Coupling market size was estimated at USD 120.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
