Report Overview

Backscatter X-Ray Device is an advanced X-ray imaging technology equipment. Traditional X-ray machines detect hard and soft materials by the variation in x-ray intensity transmitted through the target. In contrast, backscatter X-ray detects the radiation that reflects from the target. It has potential applications where less-destructive examination is required, and can operate even if only one side of the target is available for examination.

In terms of type, the backscatter x-ray devices can be divided into handheld x-ray devices and non-handheld x-ray devices, of which the handheld x-ray devices hold the biggest share about 65%. And terms of application, backscatter x-ray devices are mainly used in airport, customs and border protection, law enforcement, military and defense. Airport is the largest application that holds a share about 32%. The main players of backscatter x-ray devices are Inc, Viken Detection, Tek84, Nuctech, etc. Bosson Research's latest report provides a deep insight into the global Backscatter X Ray Devices market covering all its essential aspects.
