## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Backsheet Laminates for Solar Module competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Backsheet Laminates for Solar Module reached approximately 2,896 k tons, with an average global market price of around US\$ 1690 per ton. Gross margin is about 43%. The cost is 963 usd. Production Capacity is about 3,000-3,200 k tons. Backsheet Laminates for Solar Module is the protective rear layer of photovoltaic (PV) modules, designed to shield internal components like solar cells and encapsulants from environmental stress such as UV radiation, moisture, and mechanical damage. Typically made from multilayer laminates combining materials like PET (polyethylene terephthalate), PVF (polyvinyl fluoride), or PVDF (polyvinylidene fluoride), back sheets provide essential functions including electrical insulation, weather resistance, and mechanical support. Their durability directly affects the lifespan and safety of PV modules, making them a critical component in ensuring long-term, stable solar power generation. The upstream segment of the solar module backsheet composite materials industry chain primarily includes suppliers of high-performance polymer materials (such as PET, PVF, PVDF), functional coating material suppliers, additive and flame retardant suppliers, as well as manufacturers of film extrusion, coating, and lamination processing equipment, providing raw materials and production equipment for backsheet materials. The midstream comprises solar backsheet manufacturers and composite film processing enterprises, responsible for multi-layer film lamination, interlayer bonding, heat sealing, and electrical insulation testing. The downstream segment comprises photovoltaic module manufacturers, solar power plant developers, and distributed PV system installers. They utilize backsheets to provide mechanical support, insulation protection, and environmental shielding for photovoltaic

cells. The overall supply chain is characterized by: upstream raw materials and process equipment determining backsheet performance and cost; midstream processing quality impacting PV module reliability; and downstream market demand directly driving capacity expansion and technological upgrades.

The global Backsheet Laminates for Solar Module market size was estimated at USD 4718.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.60% during the forecast period.
