## Abstracts

Bacterial cellulose (BC) is a natural biomaterial synthesized by bacteria. It possesses a unique structure of cellulose nanofiber-weaved three-dimensional reticulated network that endows it excellent mechanical properties, high water holding capability and outstanding suspension stability. Nanocellulose is a term referring to nano-structured cellulose. This may be either cellulose nanofibers (CNF), also called microfibrillated cellulose (MFC), nanocrystalline cellulose (NCC or CNC), or bacterial nanocellulose, which refers to nano-structured cellulose produced by bacteria. Nanocellulose is produced from plant/tree through cellulose extraction or cellulose derived from bacteria via a culture medium. Some parameters of nanocelluloses are as follows: Diameter: 5 nm - 500 nm. Length: 10s nm - 100s ?m. Specific surface area: 10s - 100s of m<sup>2</sup>/g. Nnanocellulose have many special properties, such as Natural & renewable, Biodegradability, Biocompatibility, High strength & modulus, High surface area, High aspect ratio, Chemical functionality (e.g. for modification), Dimensional stability, Moisture absorption, Thermal stability (~200°C), etc. The report statistic scope includes bacterial and plant-based nanocellulose for microbial and bacterial cellulose commercial scale is extremely small. Bacterial cellulose has shown significant promise in the biomedical field, particularly for applications like wound dressings, artificial skin, and tissue engineering scaffolds. Its biocompatibility and high moisture retention capabilities support tissue regeneration and healing processes. The global shift towards sustainability is influencing the demand for eco-friendly materials. Bacterial cellulose, being biodegradable and produced from renewable resources, aligns with environmental concerns and regulations driving companies toward greener alternatives.

The global Bacterial Cellulose market size was estimated at USD 470.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 19.00% during the forecast period.
