Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Bacterial Proteins competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Bacterial proteins in SCP are proteins derived from bacteria grown as biomass, typically for use as a high-protein ingredient in animal feed, aquaculture, pet food, or potentially human nutrition. They are produced by cultivating selected bacterial strains on inexpensive carbon sources (e.g., methane, methanol, agricultural residues) in controlled bioreactors, then harvesting and processing the cells as a protein-rich powder or paste. In 2024, global Bacterial Proteins production reached approximately 12000 Tons, with an average global market price of around US\$ 3-8 per kg.

The global Bacterial Proteins market size was estimated at USD 86.53 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
