### Report Overview

Baculovirus Expression System is a type of protein expression system that uses insect cells and baculoviruses to produce recombinant proteins. This system has become increasingly popular for the expression of eukaryotic proteins that are difficult to produce in other systems, such as bacteria or yeast. Baculovirus Expression System involves the insertion of a gene of interest into a baculovirus genome, which is then used to infect insect cells. The infected cells then produce large quantities of the recombinant protein, which can be purified and used for various applications, such as drug discovery, vaccine development, and protein structure analysis.
