Abstracts

Bag in Box (BIB) packaging refers to a flexible, collapsible inner pouch typically made of multilayer laminated films (such as polyethylene, EVOH, or metallized layers) that is housed within an outer corrugated fiberboard box, featuring an integrated tap or valve for controlled dispensing. This design allows for efficient product storage, transportation, and usage, minimizing oxygen exposure to extend shelf life, reducing packaging waste compared to rigid containers, and offering cost-effective logistics due to its lightweight and space-saving properties when empty. BIB packaging is widely used for liquids and semi-liquids across industries such as food and beverage (e.g., wine, juice, syrup), industrial liquids (e.g., chemicals, lubricants), and even in sectors like pharmaceuticals and cosmetics for sterile or sensitive formulations.
