Abstracts

The Bag On Valve (BOV) system is a packaging technology that utilizes a pressurized canister containing a separate, collapsible bag or pouch inside, which holds the product formulation; this design physically separates the product from the propellant gas, ensuring that only the product?without any propellant contact?is dispensed through the valve when activated. The system is particularly valued for its ability to protect sensitive or viscous formulations (such as pharmaceuticals, cosmetics, food products, and industrial chemicals) from contamination, oxidation, or degradation, while also enabling 360-degree dispensing, precise dosage control, and near-complete evacuation of the product, reducing waste and extending shelf life.

The global Bag On Valve System (Bov) market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
