## Abstracts

Baggage handling software is a vital component of baggage handling systems in modern transportation hubs. Leveraging advanced computer technology and information technology, it achieves automated management and monitoring of the entire baggage process, from check-in, security screening, sorting, transportation, to delivery. This software typically includes multiple functional modules, such as baggage information entry, tracking and inquiry, sorting control, and transportation scheduling. Through these modules, staff can real-time understand the location and status of baggage, promptly respond to and handle anomalies, ensuring safe, accurate, and efficient baggage handling. Baggage handling software exhibits a high level of intelligence and automation. It can automatically recognize baggage tag information, match it with passenger information, and generate a unique baggage tracking code. During baggage handling, the software updates the baggage's location and status information in real-time and displays it to staff through a visual interface. Additionally, it automatically adjusts the operating parameters of sorting equipment based on baggage destinations and sorting requirements, achieving rapid and accurate baggage sorting. Furthermore, baggage handling software boasts powerful data analysis capabilities. It collects and processes vast amounts of baggage handling data, such as baggage volume, processing time, and anomaly rates, providing valuable decision support for hub operations and management.

The global Baggage Handling Software market size was estimated at USD 1135.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
