## Abstracts

Baggage tracking software is a specialized tool designed to track and manage the location and status of baggage, primarily in the context of the aviation industry and other transportation - related fields. It uses technologies such as RFID, barcodes, and GPS to track the location of baggage in real - time. This allows airlines, airports, and ground handling staff to know the exact position of each piece of baggage at any given time, from the check - in counter to the aircraft hold and finally to the baggage claim area. The software can monitor the various statuses of baggage, such as whether it has been checked in, loaded onto the aircraft, transferred, or delayed. It can also detect any abnormal situations, such as baggage being lost, damaged, or misrouted, and send out alerts in a timely manner. With the improvement of passengers' requirements for travel experience, there is a growing demand for real - time tracking of baggage. Airlines and airports are also realizing the importance of providing accurate and timely baggage information to improve customer satisfaction, so the market share of real - time tracking software is expected to increase. The continuous development of technologies such as the Internet of Things, big data, and artificial intelligence is promoting the innovation and development of baggage tracking software. For example, the integration of IoT technology enables more accurate and reliable real - time tracking; the application of big data analysis can improve the efficiency and accuracy of baggage handling; and the use of artificial intelligence algorithms can predict potential baggage - handling problems in advance and take preventive measures. With the growth of the global aviation industry and the increase in the number of air passengers, the demand for baggage tracking software is also growing globally. Emerging markets such as Asia - Pacific and South America are expected to have significant growth potential due to the continuous development of the aviation industry and the improvement of airport infrastructure in these regions.

The global Baggage Tracking Software market size was estimated at USD 846.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
