Report Overview

A balancing machine is a measuring tool used for balancing rotating machine parts such as rotors for electric motors, fans, turbines, disc brakes, disc drives, propellers and pumps. Balancing machines are used to measure and correct the unbalance of rotating components (rotors). A typical balancing machine has pedestals, with some kind of roller bearings on top. A rotor is placed on these roller bearings so that the rotor can rotate easily. A belt is slung around the rotor and driven by an electric motor to make the rotor spin.
