## Abstracts

Ball caster transfer table is used to transfer single glass and single or multiple insulating glass units laterally. It is composed of welded steel pipe structure, rectangular pipe frame and legs, with long-term durability, and the rubber spherical casters will not scratch the glass. Products include pneumatic and non pneumatic, with different angles or partial inclination, etc. The Ball Caster Transfer Table market offers a specialized solution for material handling and transfer in various industrial settings. Ball caster transfer tables consist of a series of ball casters or rollers arranged in a grid pattern within a table frame. These tables provide a low-friction surface that allows for easy movement and rotation of heavy objects in multiple directions. They are commonly used in manufacturing, assembly lines, and material handling applications to facilitate the smooth transfer of components or products between workstations or along conveyor systems. The ball caster transfer table market offers a range of sizes and configurations to suit different load capacities and layouts, providing flexibility in optimizing production processes. While it serves a niche within the broader material handling equipment industry, ball caster transfer tables are essential for improving efficiency and ergonomics in industrial environments, reducing manual labor and enhancing productivity. Prices can vary based on size, load capacity, and customization options.

The global Ball Caster Transfer Table market size was estimated at USD 191.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
