## Abstracts

Ball Retainer is a key component in the bearing, usually made of metal (such as steel, brass) or polymer (such as polyamide, polyether ether ketone), used to isolate and guide the ball, ensuring that it is evenly distributed in the bearing and rolls along the correct trajectory. It prevents ball contact, reduces friction and wear, optimizes load distribution, improves bearing rotation accuracy, stability and load carrying capacity, while extending service life. Cage design and material selection need to consider the working conditions of the bearing, such as speed, load, temperature and environmental factors.

The global Ball Retainer market size was estimated at USD 1295.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
